ORGANICS

for the conscientious consumer

It is our belief that living green and making decisions that are friendly to the environment are key to a better life for people all over the world.

At M.A.I Organics our philosophy is "knowledge-based agriculture". With practical experience, drive for innovation and love of nature, the M.A.I Organics team is proud to bring you green and eco-friendly consumer solutions for your everyday living.

Our environmentally friendly tableware utilises abundantly and readily available natural materials such as grass, bamboo, areca leaves, calotropis gigantea leaves and sugarcane bagasse. Our goal is to make our eco-friendly products fair and accessible to all so that people can eliminate single-use plastic products from their lives.

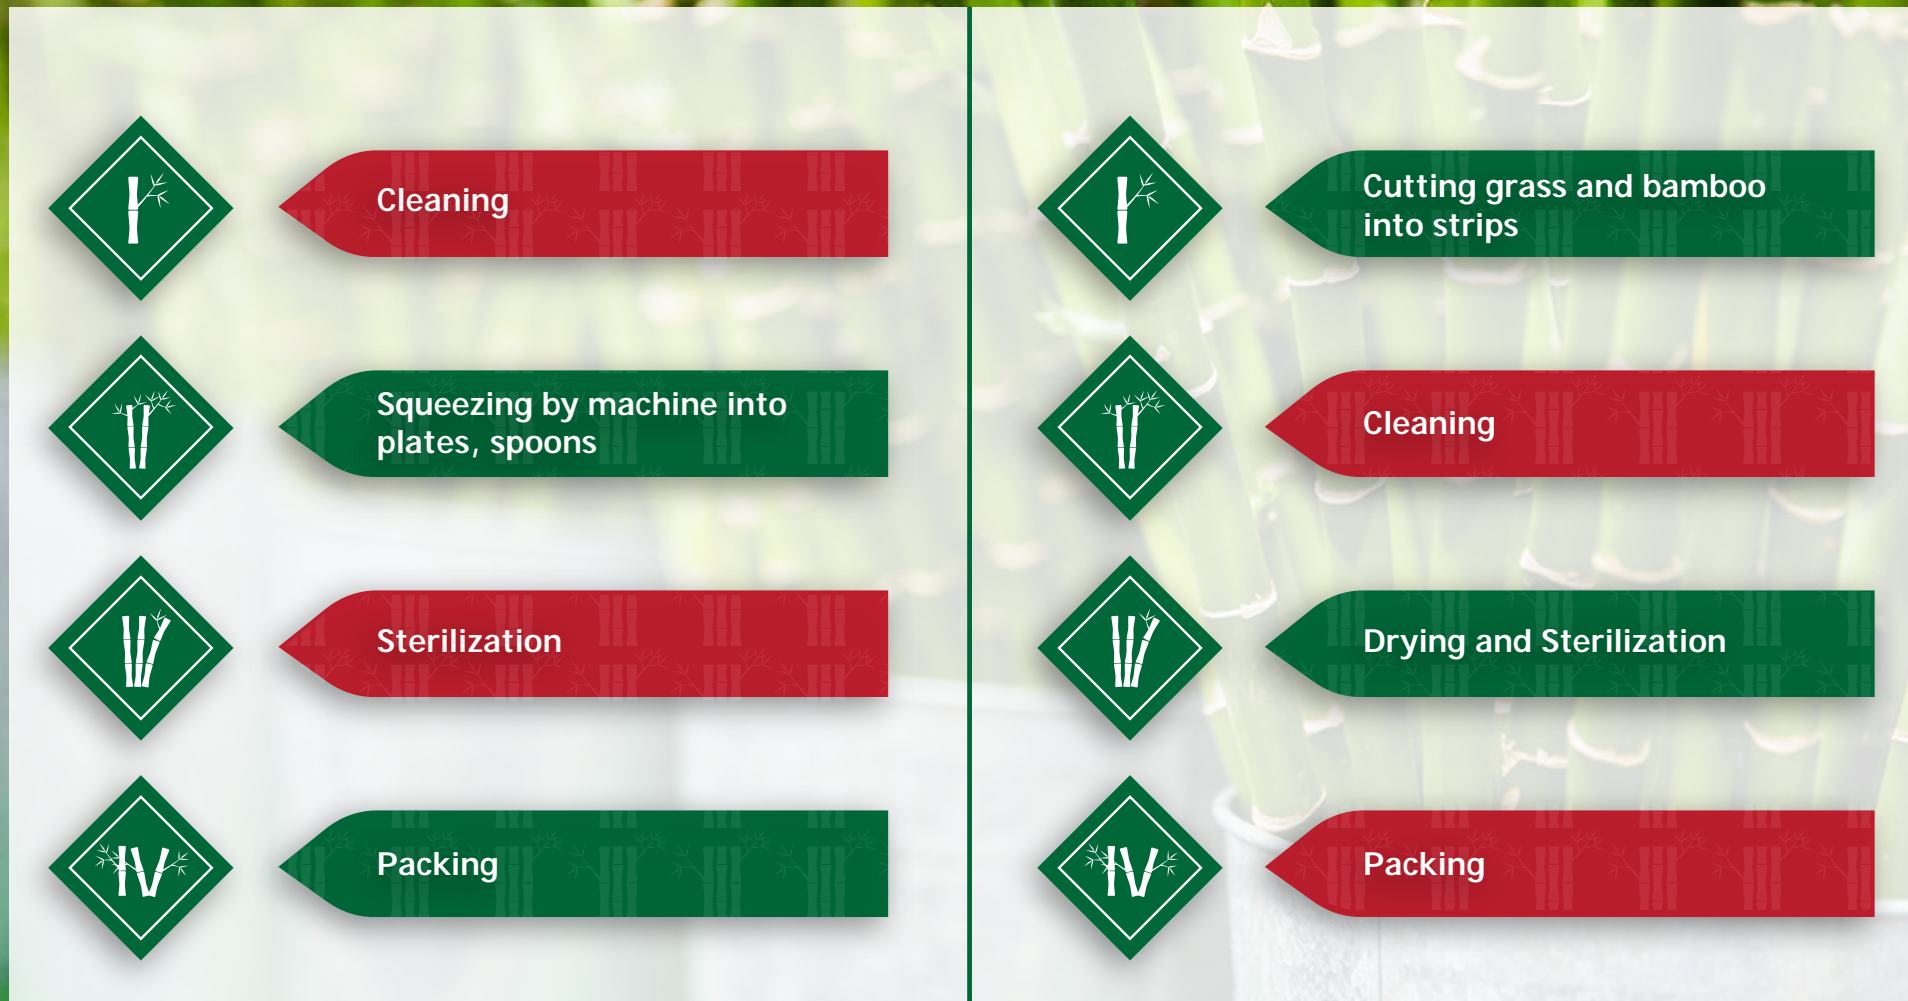

M.A.I Organics was founded by Hoang Thanh Mai and Nguyen Dang Quynh Anh in 2015. The organisation's name, M.A.I Organics (short for Mai & Anh Innovation Organics) was constructed from our vision to bring innovation to the traditional agriculture business in Vietnam. M.A.I Organics headquarter is in Hue City and our farm is located in Huong Tra District, Thua Thien Hue Province, Viet Nam.

The process of producing plates, spoons from Areca and calotropis gigantea leaves

Straw manufacturing process

- ❖ "(Lepironia Articulata) Grass, bamboo, areca, calotropis gigantea are popular plants in rural areas of Vietnam. Straws from grass, bamboo and dishes from areca & calotropis gigantea leaves are capable of replacing disposable plastic products.
- ❖ The use of environmentally friendly products as an alternative to disposable plastics will contribute to environmental protection and generate additional income for Vietnamese farmers"
