

# Efficient Healthcare Storage Solutions

*"The mobile shelving system meets the ergonomic and safety aspects which are important issues in our hospital."*

Jan De Veylder  
Program Manager at the operating theatres

Want to store your medicines centrally but don't have sufficient shelf space? Bruynzeel's space-saving Compactus Dynamic® Pro XTR can provide a neat solution that is ideal for pharmacies, hospitals and pharmaceutical companies. With drawers in different heights and depths and central locking to shut the whole system in one go, the Compactus Dynamic® Pro XTR is ideal for keeping medicines safe and secure. Bruynzeel's Compactus Dynamic® Pro XTR ensures better management of the inventory and increased efficiency allowing for logical and efficient storage and cataloguing of a growing number of products.

With the increased use of digital patient files, the compact Compactus® Dynamic Pro XTR will ensure that essential paper files take up the minimum of space and thereby cutting estates costs.

## Prevent bacterial contamination

The Compactus Dynamic® Pro XTR can be finished with a special antimicrobial powder coating. Ideal for the storage of objects that need to be protected against bacteria such as E.coli, MRSA, and Listeria, the antimicrobial powder coating gives extra protection against infection and minimises the risk of cross-contamination.

The coating is not a substitute for proper cleaning procedures, but does give users the peace of mind that every step is being taken to promote a hygienic environment.

*"I was immediately convinced that we could increase our storage capacity dramatically thanks to this mobile shelving system."*

Peter Van Houdenove  
Head nurse in intensive care
